** FIDJI 2010 - SHORT REVIEW from W7GJ **

Hello! Sorry I have been so slow providing a summary of the trip
As soon as I returned home, I have been extremely busy working
on the re-election campaign of my XYL. I still have not totally
unpacked from the Fiji trip yet! So, I still have not had a chance
to write up a detailed trip report. In the meantime, there are
the daily updates along with a few photos on my website:
http://www.bigskyspaces.com/w7gj/Fiji2010.htm
I have mailed out all the QSL's to everyone who has sent me a card
and an envelope so far. The results were 52 QSO's with different
stations and 17 additional stations copied. Thanks to everyone
who made the effort to get on the air and watch for me. My
moonrises were definitely the best times, and I saw my own echoes
then...in fact, sometimes that is all I saw on my moonrise.
I don't know if people simply were not calling me then, or whether
I was totally locked out because of slow Faraday rotation. I do
know that the Kp index was mostly quite low during the DXpedition
and that does often make for very good cndx, but also very slow
change in polarity. There were extended periods where I copied
stations very well, or failed to copy them, so I could definitely
see that the polarity was not changing very fast. I will update
the website with more information as I get more time. I certainly
enjoyed the chance to work so many 6m stations and am looking
forward to the next outing to a rare DXCC ;-) GL and VY 73,

** F/TEP on 50 MHz **

GE - just a further note to say that the F/TEP continues for
South EU - and for me I still RX AF TV - 5Z was in last night
late on pure TEP III mode for about an hour - but nil on 50. I

hope more will look - we have very few indicators to the south - but at long last we can see the very few TV TX's that are on there - so lets use them and report our observations. hopefully Hams will come on & try the band on not be alarmists or tourist
